

# INTEGRATING MULTI-HAZARD EARLY WARNING SYSTEMS AND IMPACT ASSESSMENT TOOLS

***K J Ramesh***  
***India Meteorological Department***  
***New Delhi***

---

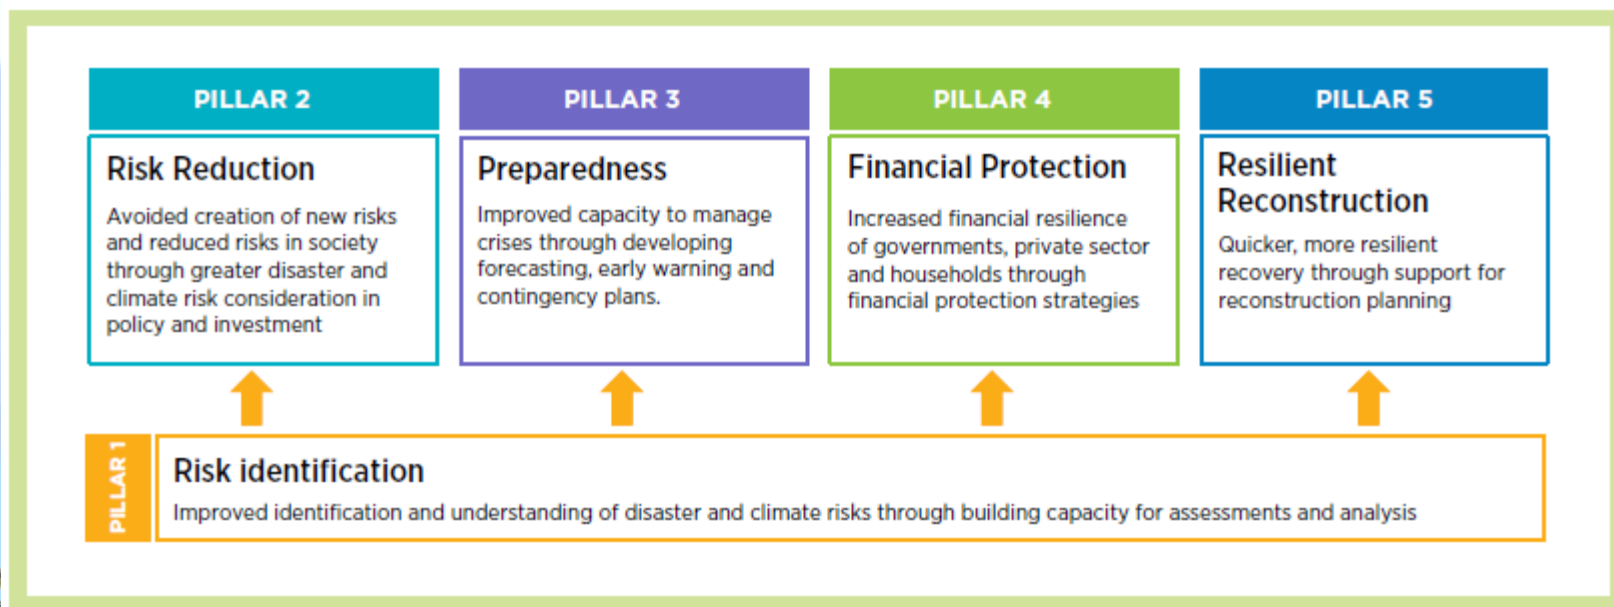

**भारत मौसम विज्ञान विभाग**  
**INDIA METEOROLOGICAL DEPARTMENT**

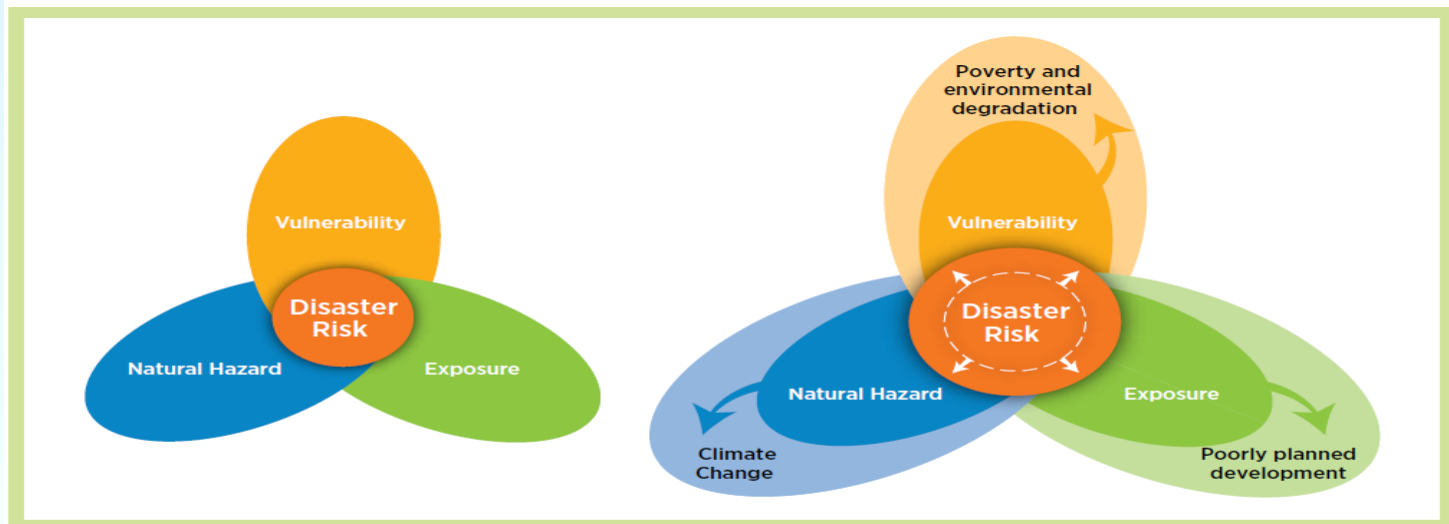

## Inputs of climate information services to various stages of the climate resilient framework

## An operational framework for managing climate and disaster risk

# Disaster and Climate Risk

Disaster risk is determined by the occurrence of a natural hazard (e.g., a cyclone), which may impact exposed populations and assets (e.g., houses located in the cyclone path). Vulnerability is the characteristic of the population or asset making it particularly susceptible to damaging effects (e.g., fragility of housing construction). Poorly planned development, poverty, environmental degradation and climate change are all drivers that can increase the magnitude of this interaction, leading to larger disasters.

Total loss and damage from hydro-meteorological disasters, by affected sector (1972–2013)

# Major science themes/applications/services of the organisation

- Prediction of land, atmospheric and Oceanic states at different scales to provide weather and climate services in different spatial and temporal range
  - Nowcasting (up to 6 hours)
  - Short range (1-2 days)
  - Medium range (few days – week)
  - Extended Range (2 weeks)
  - Seasonal (Few months, e.g. Jun-Sep Monsoon)
  - Climate Scales

**Spatial range :** Location, Block, District,  
Meteorological Sub-division, River catchment,  
State and Homogeneous regions

# Weather Forecast and Warning

- All India weather Inference - Updated 4 times a Day
- All India Weather Forecast -Updated 4 times a Day
- All India Weather Warning - Updated 4 times a Day
- Nowcast warning –Updated every 3 Hours
- FOG Forecast – Location specific during winters
- Regional Weather Forecast
- Regional Weather Warning
- Bay Bulletin: Sea Area Bulletin, Coastal Area Bulletin
- Pre Cyclone Watch, Cyclone Alert, Cyclone Warning  
Post Landfall outlook
- Port Warning

## 5 Days Rainfall Forecast:

S.No.	MET-SUBDIVISION	28 Aug	29 Aug	30 Aug	31 Aug	01 Sept
1.	Jammu & Kashmir	ISOL	ISOL	ISOL	ISOL	ISOL
2.	Himachal Pradesh	ISOL	ISOL	SCT	SCT	SCT
3.	Uttarakhand	FWS	FWS	FWS	FWS	FWS
4.	Punjab	SCT	ISOL	ISOL	ISOL	ISOL
5.	Haryana, Chandigarh & Delhi	FWS	FWS	ISOL	SCT	ISOL
6.	West Uttar Pradesh	FWS	FWS	SCT	FWS	FWS
7.	East Uttar Pradesh	FWS	FWS	FWS	FWS	FWS
8.	West Rajasthan	ISOL	ISOL	DRY	DRY	DRY
9.	East Rajasthan	FWS	FWS	SCT	SCT	SCT

## Outlook for subsequent 2 days (from 0630 hrs IST of 2<sup>nd</sup> Sept 2018 to 0630 hrs IST of 04<sup>th</sup> Sept, 2018):

- Fairly widespread rainfall activity likely over Uttar Pradesh.
- Isolated to scattered rainfall activity in the rest of the region.

## SPATIAL DISTRIBUTION (% of stations reporting)

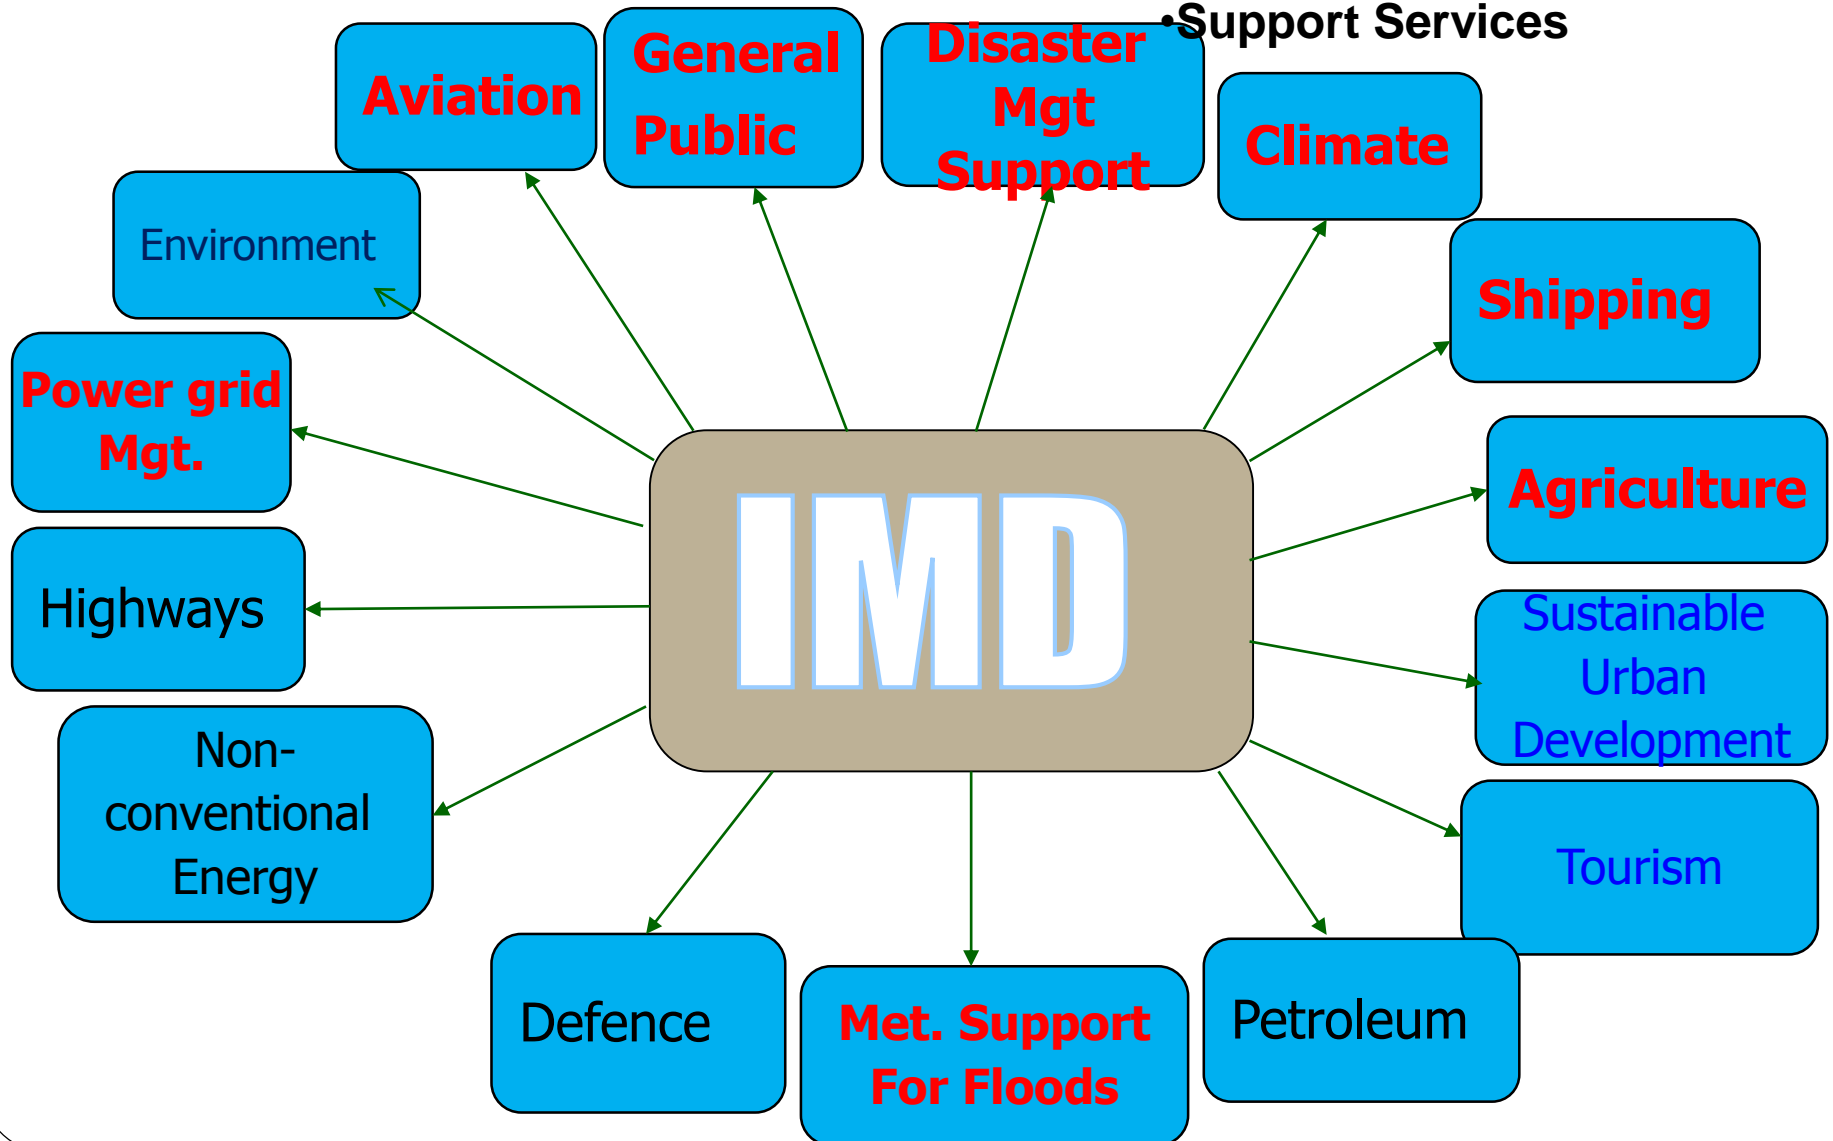

% Stations	Category
76-100	Widespread(WS/ Most Places)
51-75	Fairly Widespread(FWS/ Many Places)
26-50	Scattered( SCT/ A Few Places)
1-25	Isolated(ISOL)

## Probabilistic Forecast

Terms	Probability of Occurrence (%)
Unlikely	<25
Likely	25 - 50
Very Likely	50 - 75
Most Likely	>75

# South Asian Climate Outlook Forum (SASCOF): Beginning & Objectives

- In a meeting convened by WMO, the Directors General of the National Meteorological and Hydrological Services (NMHSs) in South Asia and Permanent Representatives (PRs) of the respective countries with WMO, at the Abdus Salam International Centre for Theoretical Physics (ICTP), Trieste, Italy, on 6 August 2009, the PRs of south Asian nations with the WMO had unanimously agreed to establish a South Asian Climate Outlook Forum (SASCOF), to be implemented from 2010 onwards. The main objectives of SASCOF are the following.
- *To review the progress made in understanding and long range prediction of summer monsoon both regionally and globally;*
- *To make available detailed information on climate variability in South Asia for dissemination along with the seasonal outlook;*
- *To provide a platform for the stakeholders of SASCOF to share and exchange experience and knowledge on summer monsoon and its prediction;*
- *To initiate capacity building/human resource development activities for the South Asian region, particularly in seasonal prediction;*
- *To build collaboration and partnerships among the members of SASCOF for mutual benefit;*
- *To identify needs of user sectors through a dialog among different groups.*

# SASCOF meetings so far

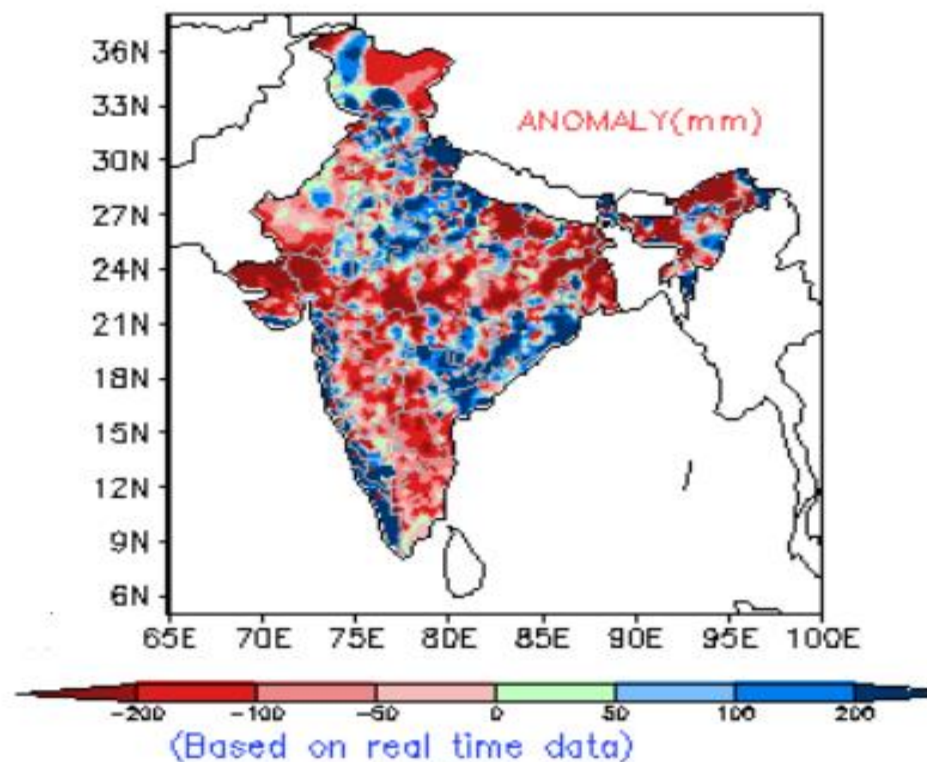

- This is one of the important LRF activities of the center. RCC, Pune has been providing technical support and taking lead role in the preparation and issuance of consensus forecast during all these forum meetings. [SASCO is co-sponsored by WMO and coordinated by IMD, currently under the demonstration phase for a WMO RCC for South Asia and IITM at Pune.](#)
- The first three (during 2010-2012) and fifth (during 2014) meetings of SASCOF were held in Pune, India.
- fourth session (in 2013) of the SASCOF was held at Kathmandu, Nepal
- sixth session (in 2015) was held at Dhaka, Bangladesh.
- Seventh session (2016), SASCOF for SW monsoon was held in Colombo, Sri Lanka
- 8<sup>th</sup> Session will be held in Thimpu, Bhutan (last week of April)
- After six sessions of SASCOF conducted each year during the period 2010-2015, first SASCOF that was focused on the **NE monsoon season** (October to December), was held in Chennai, India during 14-15 Oct 2015.
- Last year, looking into requirements of the member countries of the region, consensus forecasts were also prepared for the NDJ and DJF seasons through e-mail discussions. and
- SASCOF for NE monsoon during 2016 was held during Oct., 2016 in Nay Pyi Taw, Myanmar.
- SASCOF-10 for SW Monsoon during 2017 was held in Thimpu, Bhutan
- SASCOF-11 for NE monsoon during 2017 was held in Sept., 2017 in Male, Maldives
- SASCOF-12 for SW Monsoon during April 2018 was held in Pune, India

Probability of the most likely category for the 2018 Southwest Monsoon Rainfall

SASCOF-12 Forecast  
Issued on 18<sup>th</sup> April 2018

IMD MESOSCALE MODEL(03 Km) 24 HOURLY RAINFALL (mm) FORECAST (48 hr)  
based on 00 UTC of 13-08-2018 valid for 03 UTC of 15-08-2018

IMD MESOSCALE MODEL(03 Km) 24 HOURLY RAINFALL (mm) FORECAST (72 hr)  
based on 00 UTC of 12-08-2018 valid for 03 UTC of 15-08-2018

# OPERATIONAL ERF IMPLEMENTED IN IMD

- Extended Range Forecast – Coupled Atmospheric-Ocean General Circulation Models (CFSv2) at different resolutions CFSv2\_T382, CFSv2\_T126, GFSbc\_T382, GFSbc\_T126 (with 16 members) implemented in IMD in December 2016.
- The hindcast (2003-2017) and forecast is run once in a week (every Wednesday initial condition) for 32 days period and the forecast for mean and anomaly is prepared for 4 weeks on every Thursday. (TMAX, TMIN, RAIN, WIND, MJO, etc)

The operational products are prepared for use in India and abroad.

- ❖ The customised products in the form of met subdivision level forecast for two weeks are used for Agro advisory purpose.
- ❖ The products are also prepared for QATAR and adjoining country Bhutan

# Extended Range forecast products available in IMD

- Nowcast Guidance Bulletin from 5 October 2016.
- Based on Nowcast Guidance Bulletin, MC/RMC will issue round the clock Nowcast Bulletin
- Pan India nowcast being issued for severe weather like heavy rain/snow, thunderstorm etc

India Meteorological Department  
National Weather Forecasting Centre  
Mausam Bhawan, Lodi Road, New Delhi-110003

Nowcast Guidance for next 24 hours

Date: 20 October, 2016

Time of issue: 1230 hrs IST

Chief Synoptic features:

- The low pressure area over eastcentral Bay of Bengal & neighbourhood has become well marked and now lies over eastcentral & adjoining southeast Bay of Bengal. The associated upper air cyclonic circulation extends upto mid-tropospheric level. The system is likely to intensify into a depression during next 48 hours.
- The trough from the above system to southwest Bay of Bengal in the lower levels persists.

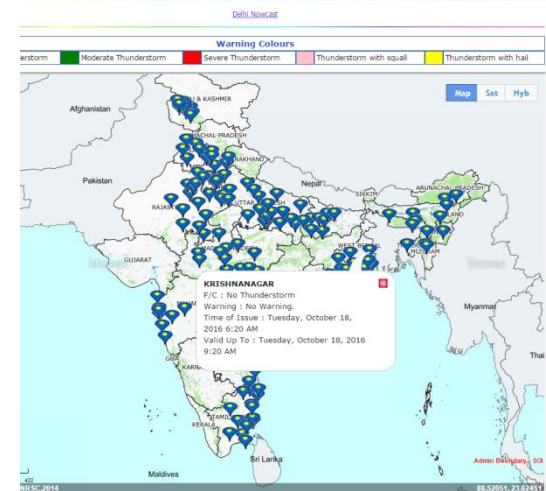

Possible areas of Rain/Thunderstorm (R/TH) activity (Priority wise) during next 24 hours:

- Andaman Island

The graphical presentation of the potential area:

# Severe Weather Forecast & Warnings skills

Noticeable improvements achieved in Skills of Heavy Rainfall Forecast (**False Alarm Rate reduced from 46% to 11% & Probability of Detection increased from 49% to 67% from 2002-12 to 2013-15**)

**Lead time of warnings increased from 3 to 5 days in respect of Rainfall, heat wave, cold wave .**

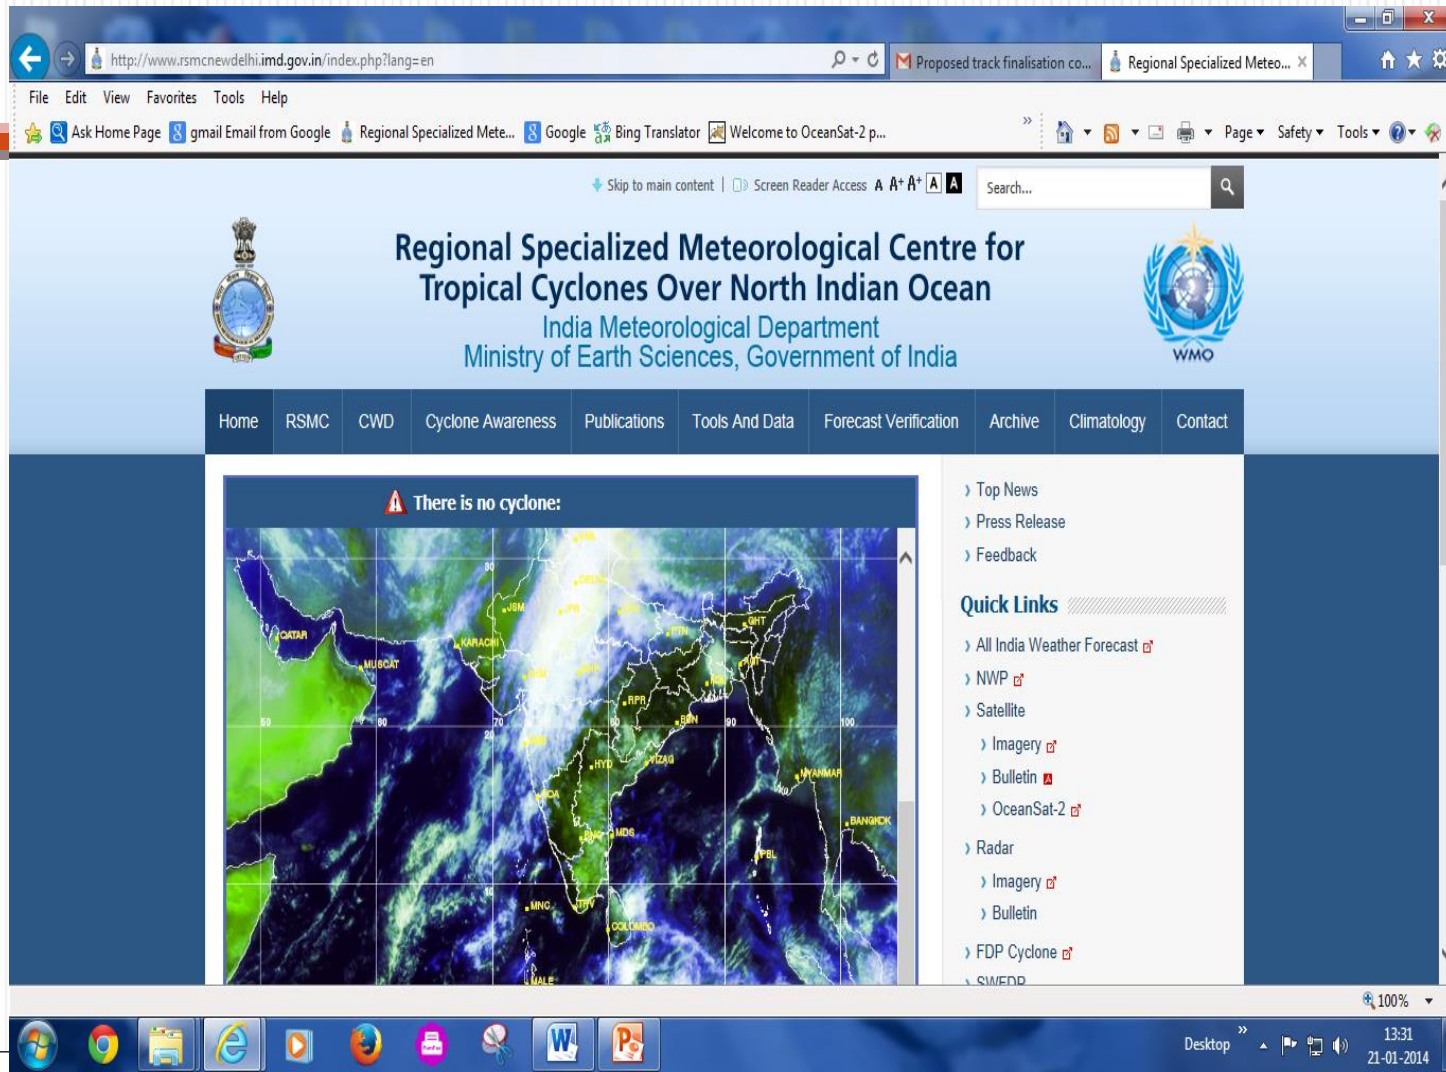

## Introduced new Forecast bulletin Terminology

**Target for 2019 : Improvement of accuracy and skill by 20% up to 7 days**

# Home Page of RSMC Website

- IMD has launched a website exclusively for RSMC, New Delhi.
- The data, forecast and products will be available to all the countries of the region through this website.

The screenshot displays the home page of the Regional Specialized Meteorological Centre (RSMC) for Tropical Cyclones Over the North Indian Ocean. The browser window shows the URL <http://www.rsmcnewdelhi.imd.gov.in/index.php?lang=en>. The page features the Indian Meteorological Department (IMD) logo on the left and the WMO logo on the right. The main heading reads "Regional Specialized Meteorological Centre for Tropical Cyclones Over North Indian Ocean", followed by "India Meteorological Department" and "Ministry of Earth Sciences, Government of India". A navigation menu includes links for Home, RSMC, CWD, Cyclone Awareness, Publications, Tools And Data, Forecast Verification, Archive, Climatology, and Contact. A search bar is located at the top right. The main content area displays a satellite image of the North Indian Ocean with a warning message: "There is no cyclone:". To the right of the image, there are sections for "Top News", "Press Release", "Feedback", and "Quick Links". The "Quick Links" section includes links for "All India Weather Forecast", "NWP", "Satellite", "Imagery", "Bulletin", "OceanSat-2", "Radar", "Imagery", "Bulletin", "FDP Cyclone", and "SWFDP". The Windows taskbar at the bottom shows the time as 13:31 on 21-01-2014.

## Heat action plan

- Heat action plan is extended to seven cities across Central India.
- Letter written by HMoES to all chief Secretaries for preparing Heat Action Plan
- Daily Bulletin on Heat Wave issued during April to June
- Indian Medical association and power sector among other were provided forecast

### 3.3 Identification of Color Signals for Heat Alert<sup>3</sup>:

Red Alert (Severe Condition)	Extreme Heat Alert for the Day	Normal Maximum Temp increase 6° C to more
Orange Alert (Moderate Condition)	Heat Alert Day	Normal Maximum Temp increase 4° C to 5° C
Yellow Alert (Heat-wave Warning)	Hot Day	Nearby Normal Maximum Temp.
White (Normal)	Normal Day	Below Normal Maximum Temp.

<sup>3</sup>Ahmadabad Heat Action Plan 2015

# Heat Wave defined in India

Heat wave considered when actual Max. temp. is  $40^{\circ}\text{C}$  or more for plains and  $30^{\circ}\text{C}$  or more for Hilly regions

## a) Based on Departure from Normal

Heat Wave: Departure  $4.5^{\circ}\text{C}$  to  $6.4^{\circ}\text{C}$

Severe Heat Wave: Departure  $>6.4^{\circ}\text{C}$

## b) Based on Actual Maximum Temperature

Heat Wave: Maximum Temperature  $\geq 45^{\circ}\text{C}$

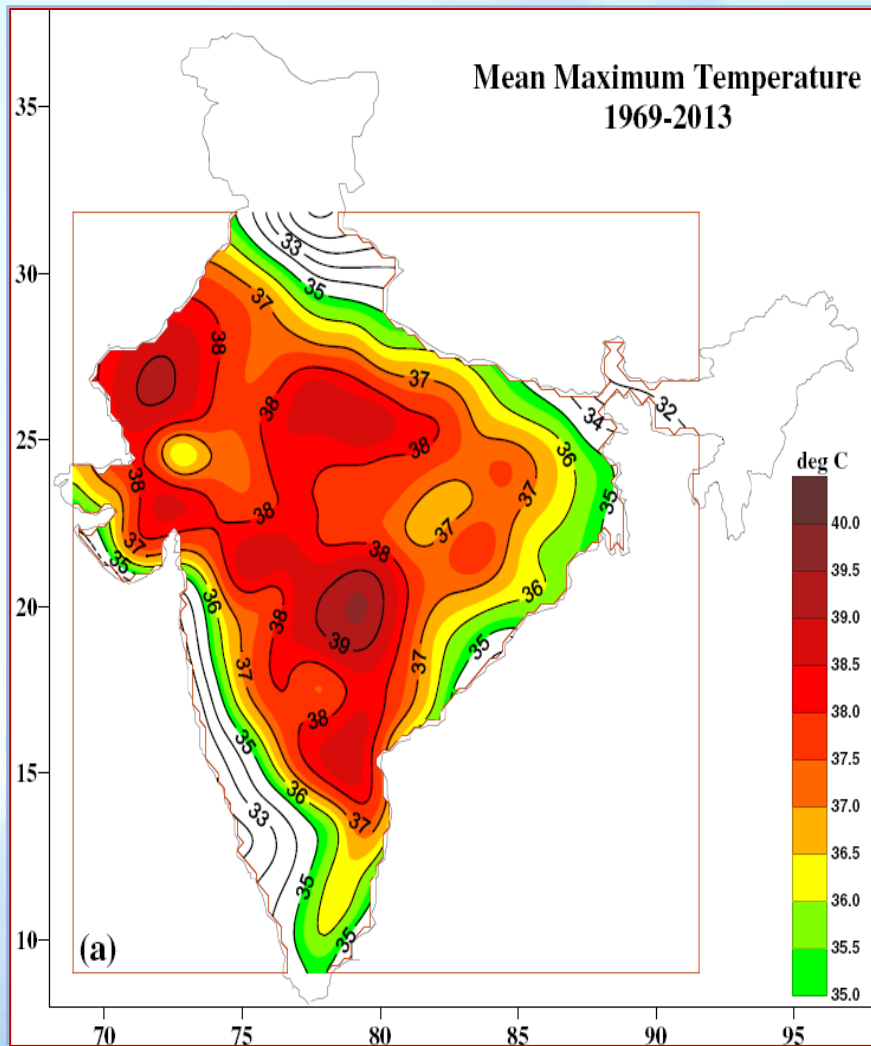

Severe Heat Wave: Maximum Temperature  $\geq 47^{\circ}\text{C}$

## c) Criteria for describing Heat Wave for coastal stations

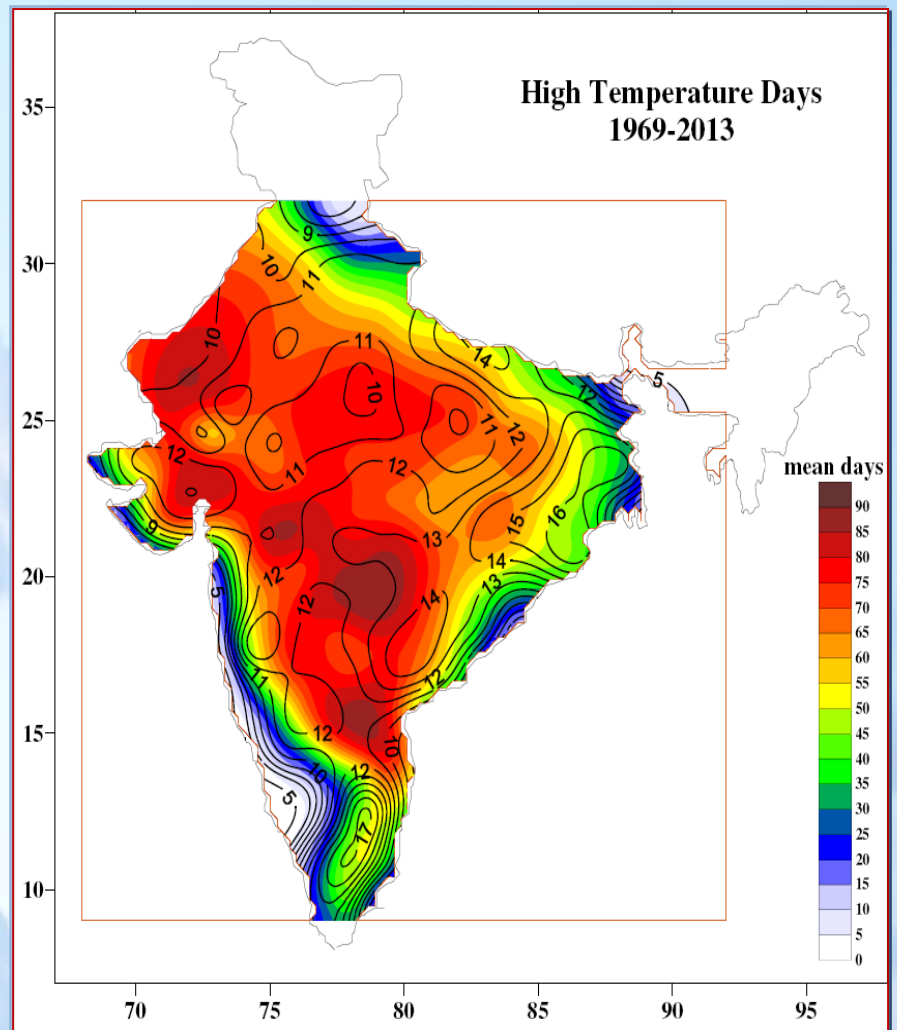

When Max Temp departure from normal is  $4.5^{\circ}\text{C}$  or more, provided actual maximum temperature is  $37^{\circ}\text{C}$  or more.

## Long-term climatological summer (March-June) mean Tmax

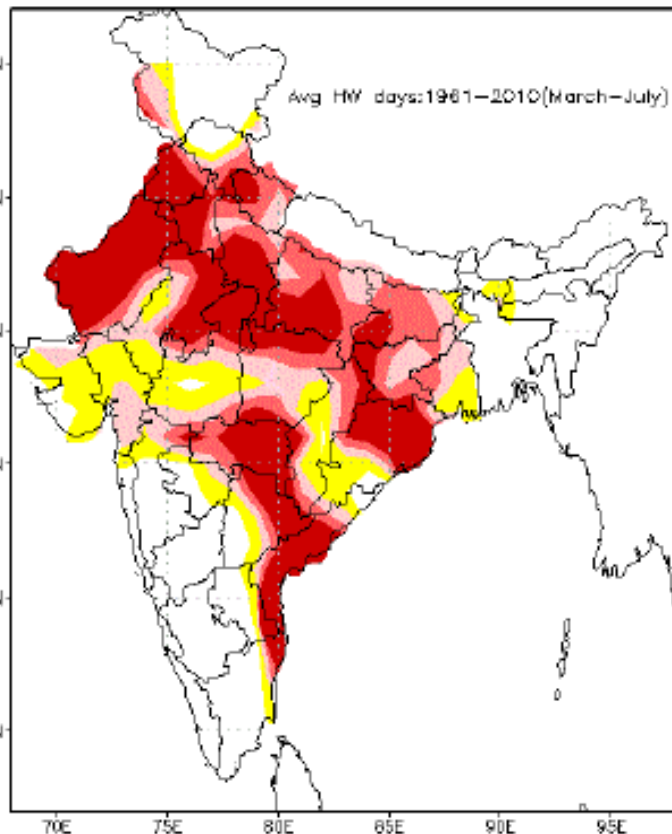

## Climatological mean number of days of summer (March-June) high ( $T_{\max} > 37^{\circ}\text{C}$ ) days

# AGROMET-DSS MENU

- Overview:** Display of observed weather parameters on India map for 1-10 days
- Outlook:** District and Block level forecast and value addition
- Crop Panel:** Crop List, growth stages, crop calendar, rainfed and irrigated crop information
- Crop Advisory Panel:** Crop custom advisory
- Data Panel:** Information of receiver groups (e-mail group)
- Analysis:** Forecast analysis in graphical form & skill score
- Logout**

# Dynamic Crop Calendar & District level contingency action for rain-fed agriculture (CRIDA)

- Advisories are prepared separately for rainfed and irrigated areas/crops in a district.
- Timing of Onset rain based sowing date for rainfed crops for each of the 660 districts in India.
- Crop calendar (CRIDA) dynamically linked with progress on sowing time to define crop cycle.
- Weather forecasts for 10 days- rain spell (3-day quantitative and 4-10 days outlook) – Updated and Verified on-line on Daily basis at MC level
- Contingency Actions in Advisories- Based on the rainfall scenario - need for supplementary or micro irrigation in dry land/ rainfed areas; re-sowing of short duration varieties etc.
- Early season/Mid-season/End season Deficiency of rainfall-linked with Contingency plans

# Economic Impact Assessment Of AAS

Survey conducted by National Council of Applied Economic Research (NCAER) in 2015.

- 95% of farmers experienced improved accuracy & reliability
- Incremental profit assessed to be 25% of net income.
- 24% farmers have access to AAS
- Annual Economic Profit on 4-principal crops (wheat, paddy, sugarcane and cotton), assessed as Rs. 38,463 crs in 2010 which raised to Rs. 42,000 crs in 2015.
- Service has the potential of generating net economic benefit up to Rs. 3.3 lakh crores on the 22-principal crops when AAS is utilized by All farming households in the country

# HYDROLOGICAL SERVICES

- **2016 :** Preparation of Rainfall Statistics; daily, weekly & monthly. Commended by the President of India.
- Provides real-time rainfall information by means of GIS based rainfall products.

## 2006

- Conventional Quantitative precipitation forecast (QPF) to CWC for flood forecast purposes for 125 river basins

The district-wise and river basin-wise rainfall statistics is helpful to farmers for their agricultural activities and flood forecast/ water management.

## 2016

- Quantitative precipitation forecast (QPF) to CWC for flood forecast purposes increased from 125 to 146 river sub-basins.
- QPF increased from 5 day to 7 days from flood season 2015.
- Sub catchment wise QPF from NWP models- GFS for 7days in addition to WRF, MME for 3 days
- QPF for 4 new catchments Jhelum, Pennar, Torsa, Sankosh which involves 12 sub catchments.

**By 2019 :** Develop a State-of-the-Art Hydrological Information System and Flood Warning Support for all the Major River Basins of the Country.

- Monitor the three dimensional variability of regional hydrological cycle and assess its expected changes and impacts in the future.

# HYDROLOGICAL SERVICES

- Preparation of Rainfall Statistics; daily, weekly & monthly. Commended by the President of India.
- Provides real-time rainfall information by means of GIS based rainfall products.

## Flood Forecast for River Basins based on IMD Rainfall Forecast

Home

GFS Hydrology

WRF Hydrology

Rainfall

Home Tab: Click on desired river basin (avoid clicking label)

A window opens to 'GFS Hydrology' tab showing

- the river basin with subbasin on the left map panel
- CWC - IMD FMO subbasins on the top right map panel
- Chart, table and description on the bottom right panel for subbasin average daily rainfall and stream flow

### Stream flow forecast at sub basin level for river basins

SWAT hydrological model (<https://swat.tamu.edu/>) is used to simulate the stream flow. Hydrological modelling has been carried out for the entire river basin. Calibrated and validated model is currently run at daily time step to produce stream flow forecast.

Input data used **example:**

- Digital Elevation Model: DEM SRTM – 30m resolution
- Landuse (NRSA 2007-08)
- Soil – NBSSLUP/FAO
- Reservoir characteristics and operation rules (Major and medium projects)
- Current management/operation practices, existing irrigation as per crop demand. (Note: Current crop management practices include irrigation sources from Surface and Ground water).
- Weather
  - Current day : GPM (IMD) gridded rainfall, temperature at 25km resolution
  - Forecast : IMD WRF (9 km grid) – 3 days forecast and IMD GFS (25 km grid) - 6 days forecast

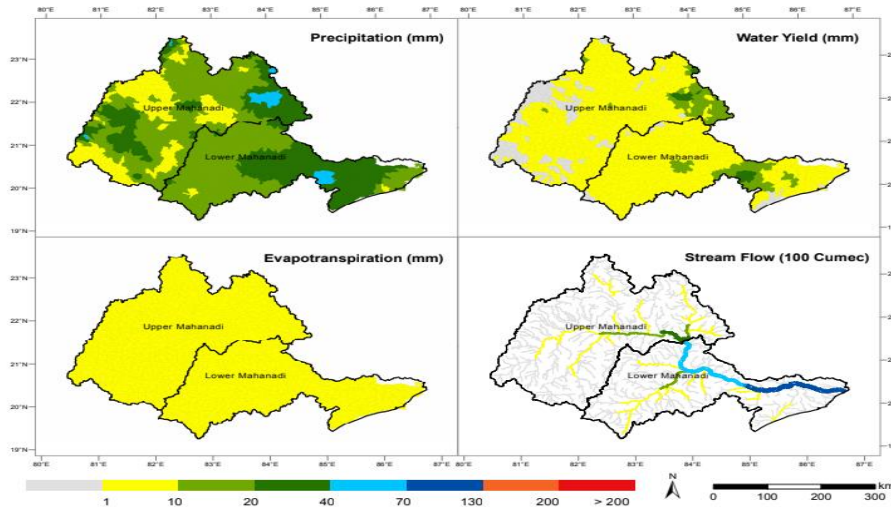

- **SWAT operates on a daily time step at basin scale and has been modified as per Indian Conditions.**
- **SWAT uses a two-level disaggregation scheme; a preliminary sub-basin identification is carried out based on topographic criteria, followed by further discretization using land use and soil type considerations.**
- **Areas with the same soil type and land use form a Hydrologic Response Unit (HRU), a basic computational unit assumed to be homogeneous in hydrologic response to land cover change.**

# SWAT Products –Mahanadi Basin

- SWAT hydrological model run parameters on Mahanadi basin calibrated using measured discharges.

Using Observed Rainfall of 19-09-2017

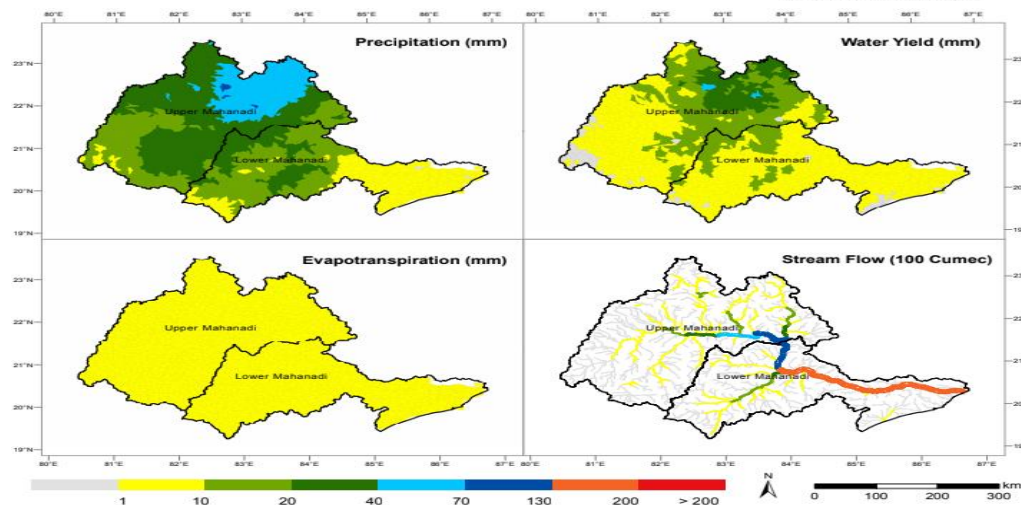

**Forecast for Stream Flow and Other Water Balance Components  
based on IMD GFS Rainfall Forecast (24) for Mahanadi Basin**

Valid for 20-09-2017

**Forecast for Stream Flow and Other Water Balance Components  
based on IMD GFS Rainfall Forecast (24) for Mahanadi Basin**

Valid for 21-09-2017

# South Asia – Regional Flash Flood Guidance System (SAsiaFFGS)

*Under*

*Global Initiative Project for Flash Floods with MoU between various organisations like UN-WMO, HRC, USAID/ OFDA, NOAA and regional NMHS (IMD).*

**Implemented**

**By**

**भारत मौसम विज्ञान विभाग**

**India Meteorological Department**

# Introduction to SAsiaFFG

## Implementation Background

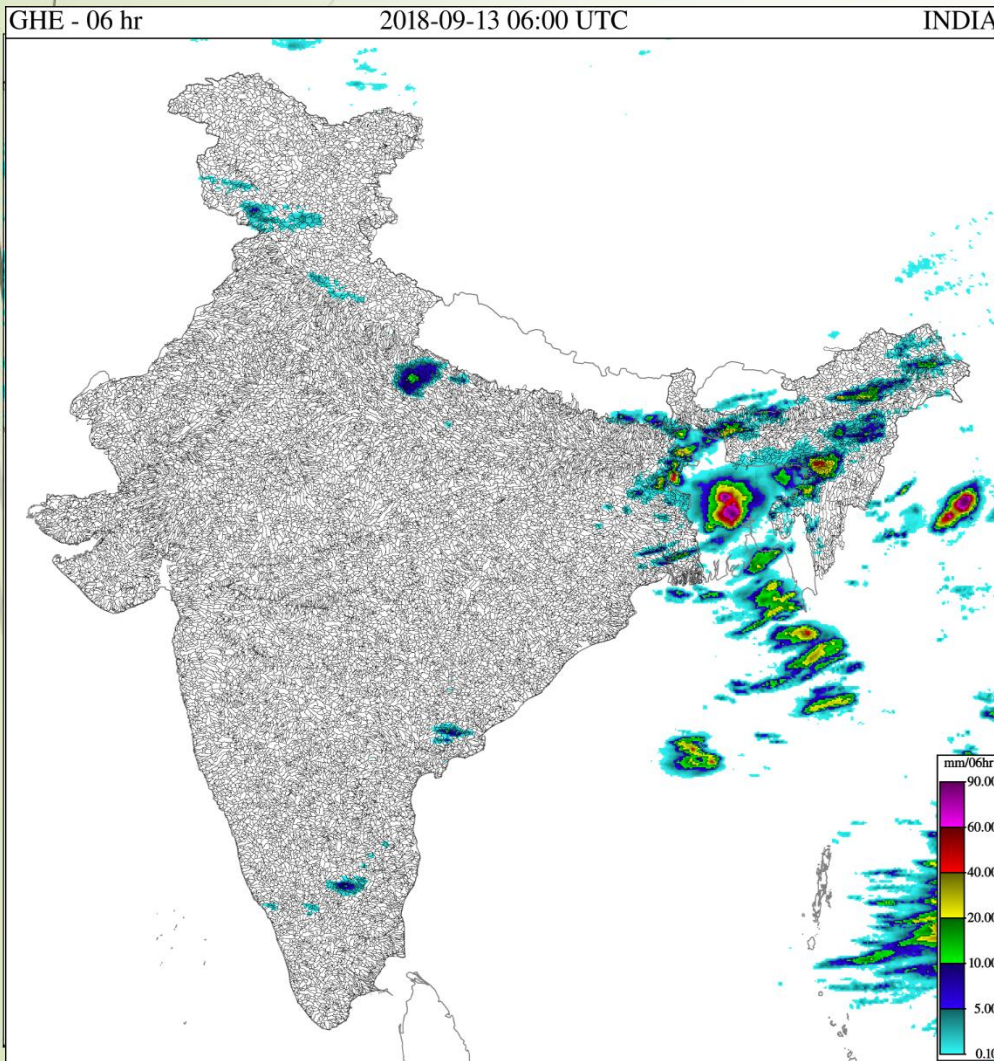

---

### The South Asia Flash Flood Guidance System

- The primary mission of the South Asia (SAsiaFFG) System is to provide real-time informational guidance products pertaining to the imminence of potential small-scale flash flooding throughout the region of application.
- Ingests real-time satellite and gauge precipitation data on an hourly basis and, on the basis of available spatial databases, produces flash-flood-occurrence diagnostic indices over small basins in the region of interest.
- The diagnostic flash flood guidance index may then be used with nowcasts or forecast rainfall volumes of the appropriate durations to identify the likelihood of flash flooding at the outlet of specific small catchments.
- SAsiaFFG is not a predictive system in itself, rather it is a diagnostic system for flash floods that the forecaster can use with forecasts or nowcasts of precipitation to produce forecasts and ultimately warnings for flash floods.

# FFGS Satellite Precipitation: GHE

Remotely-sensed precipitation estimates provide good spatial coverage and detail.  
In situ observations (rain gauges) provide “ground truth” but often have sparse coverage.

Global Hydro-Estimator (GHE):  
Rainfall rate based on Cloud Top Brightness  
Temperature (Infrared (IR) based).  
*This is an indirect measurement.*

- ~ 4km resolution
- \*\* Short latency \*\* ( $< \frac{1}{2}$  hour)

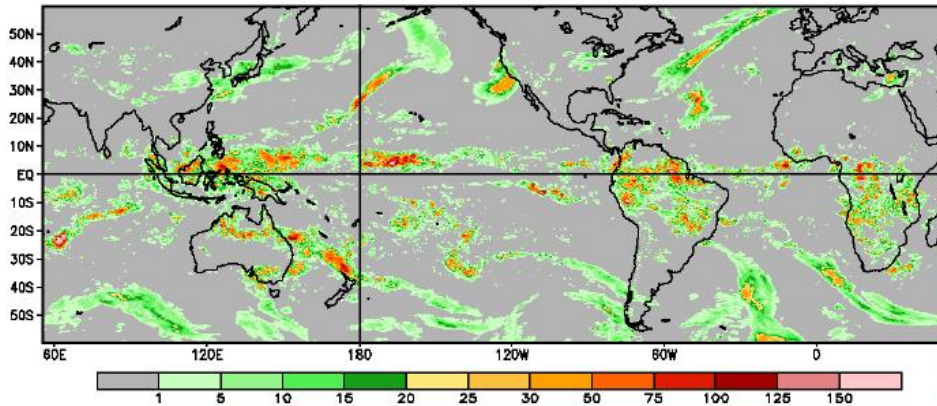

# FFGS Satellite Precipitation: MWGHE

*HRC effort to combine IR-based GHE rainfall with MW-based CMORPH rainfall.*

Daily Precipitation for: 20 Mar 2011 (00Z-00Z)  
Data on .25 x .25 deg grid; UNITS are mm/day

CMORPH Precipitation Estimates

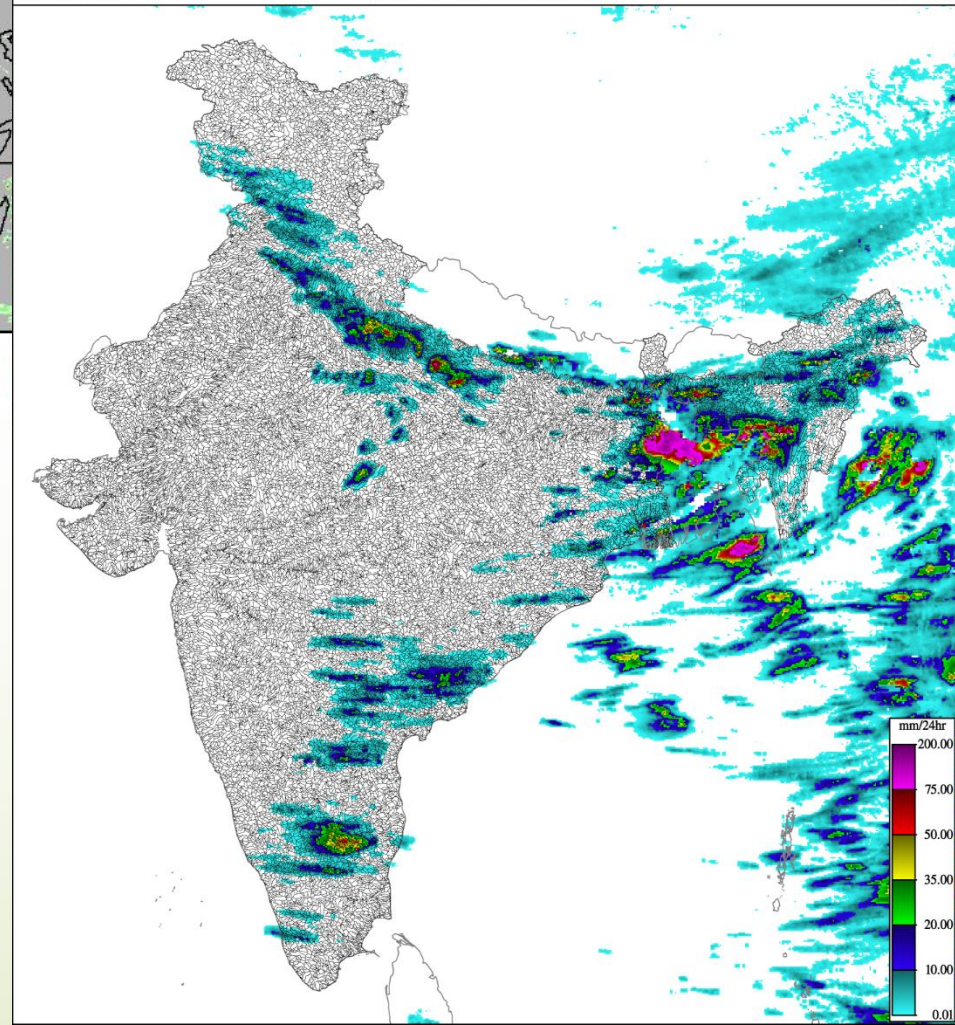

CMORPH is based on microwave scattering from hydrometeors.  
*This is still an indirect measurement.*

- ~ 8km resolution
- 18-26 hour latency in operations

MWGHE - 24 hr

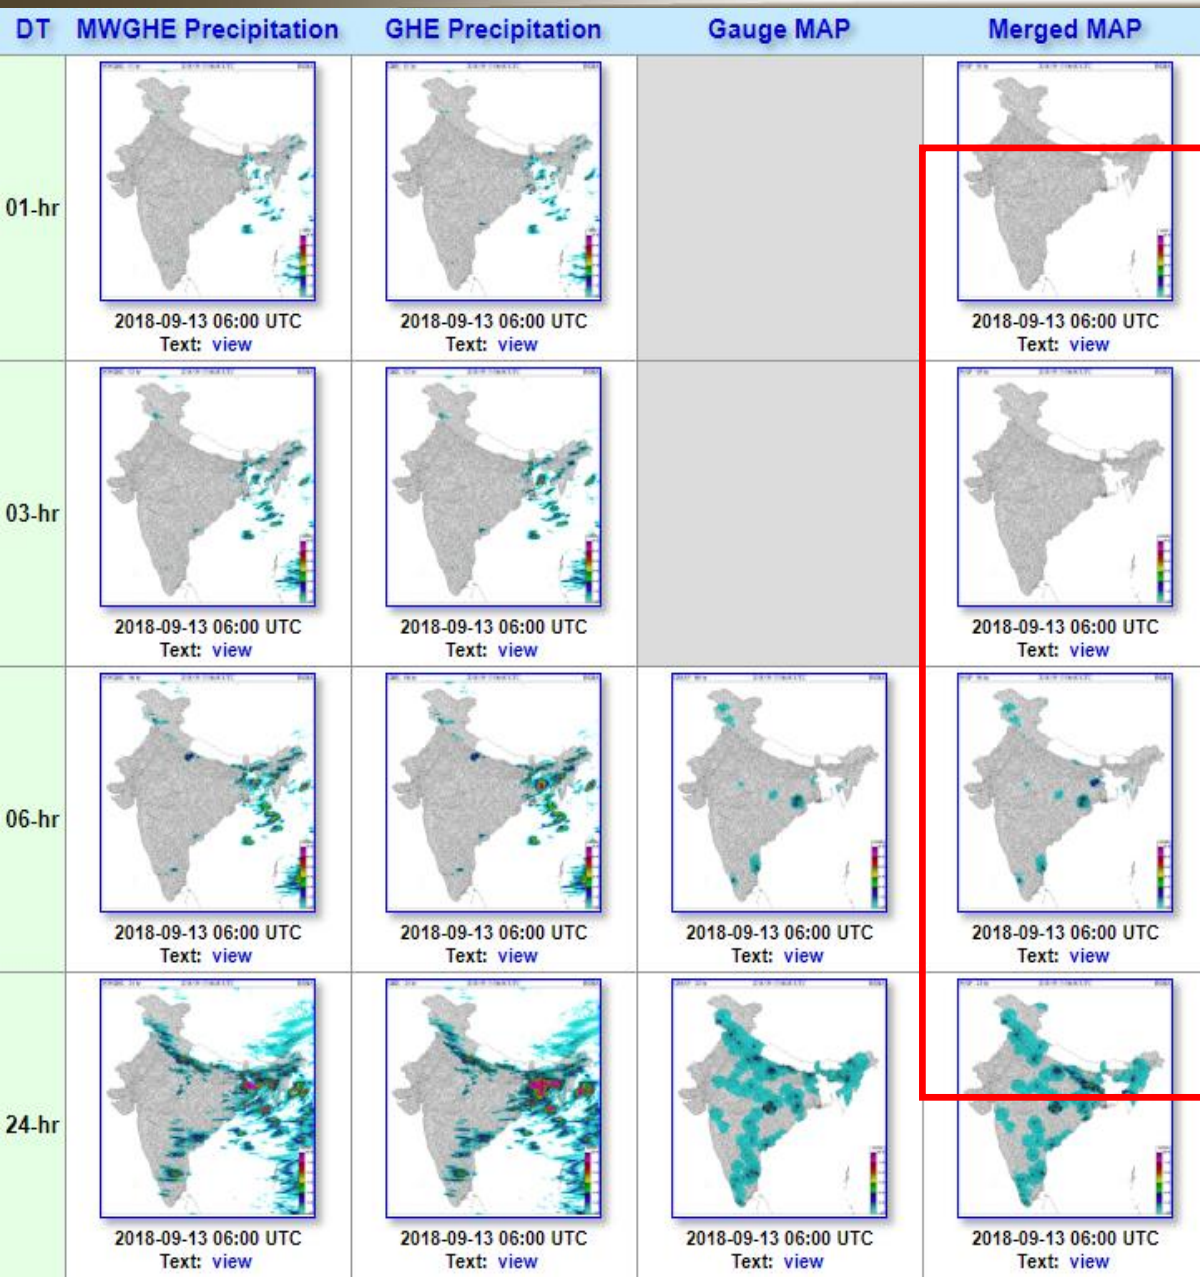

2018-09-13 06:00 UTC

INDIA

# Merged MAP Product

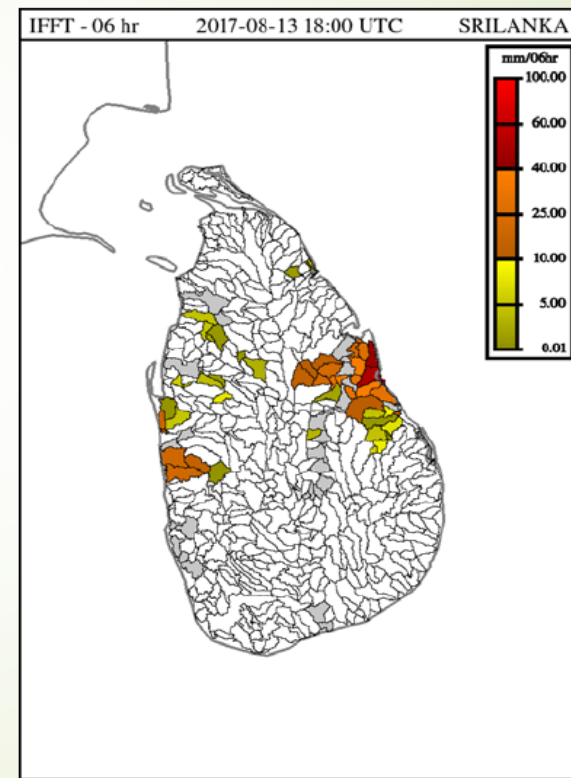

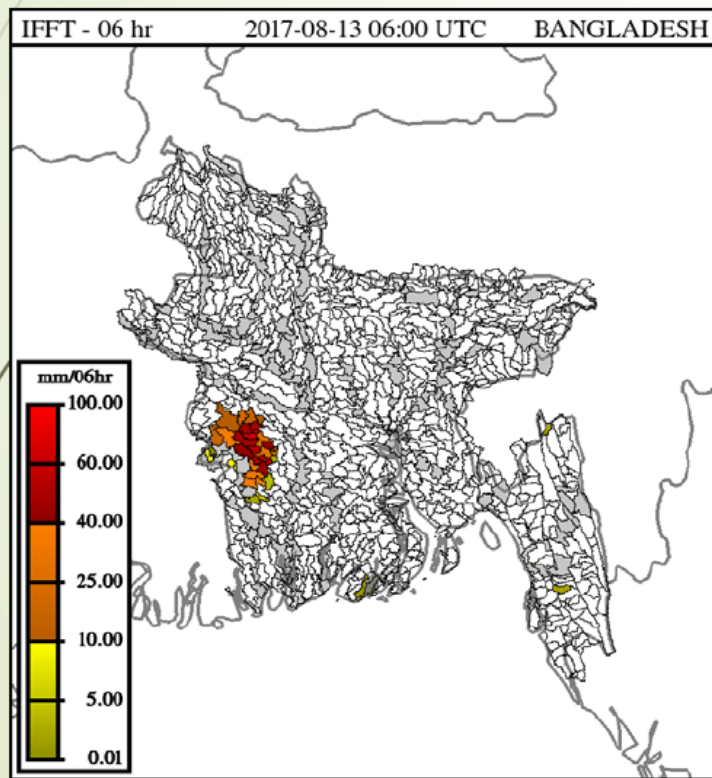

Merged MAP is the *best estimate* of Mean Areal Precipitation over each small watershed. 1-, 3-, 6-, and 24-hour accumulations.

- Satellite
- Real-time gauges
- Radar (if available)
- \* Includes bias adjustment

# FFT: Flash Flood Threat

Potential for flash flooding is increased when ***PRECIPITATION*** > ***FFG***.

*Flash Flood Threat, FFT, defined: **FFT = MAP - FFG***

*FFT provides indication of regions of potential concern.  
Color bar provides magnitude of FFT.*

# FFGS Products: FFTs

# Mangaluru: Heavy downpour leaves city in a shambles

Stanley Pinto | TNN | Updated: May 29, 2018, 14:55 IST

✉ 🖨 A- A+

Many low lying areas in the city witnessed artificial flooding.

MANGALURU: Torrential rains that lashed the city on Tuesday morning inundated most of the low lying areas in the city. The rains which started at 9am left the city in a shambles with the steady drizzle turning to a downpour by mid-afternoon. Many low lying areas in the city witnessed artificial flooding and water entered many compounds – making it difficult for residents to venture out or come in.

Major areas that saw inundation were Kodialguthu, Kottara Chowki, PVS, Kadri Kambala, Panjimogeru, Adyar, Yekkuru and other areas. Most of the roads in the city were ankle deep water due to either drains being full or lack of drains.

## MANGALURU

# South west monsoon: Heavy rains lash Mangaluru, schools to be closed tomorrow

Anil Kumar Sastry

MANGALURU, MAY 29, 2018 14:34 IST  
UPDATED: MAY 29, 2018 16:32 IST

**Mangalore Rain:** The south-west monsoon had hit the Karnataka coast earlier than usual. Mangalore and areas around it have been receiving heavy rains since Monday night. Although there was a sigh of relief for the locals during the early hours of Tuesday, there has been unabated rainfall since 9:30 am, according to a report by The Hindu. Various low-lying areas including Kottara Chowki and Ballal Bagh experienced waterlogging on Day 1 of the season.

One Air India, one SpiceJet and one Air India Express was diverted from Karnataka's Mangalore airport due to rain and poor visibility. Air traffic control (ATC) says 'it will improve soon'. Rescue operations are underway in Mangalore's Panambur as streets got water-logged following pre-monsoon rains.

The Mangaluru Central Railway Station and the adjacent Railway Mail Service office were completely inundated with rainwater and overflowing sewage

- Weather Portal For Power Sector  
<http://amssdelhi.gov.in/NRLDC/index.html>

# Important Terminology

Important Meteorological terminologies have been described

Example:-  
Rainfall Category

		Cyclone Intensity	Damage expected to Power /Communication lines
% Stations	Category	Deep depression (52-62 km/hr)	Nil
76-100	Widespread (Most Places)	Cyclone Storm (63-67 Km/hr)	Minor
51-75	Fairly Widespread (FWS/Many Places)	Severe Cyclone Storm (88-117 Km/hr)	Minor
26-50	Scattered (SCT/A Few Places)	Very Severe Cyclonic Storm (118-221 Km/hr)	Large scale disruption of Power lines
1-25	Isolated (ISOL)		
		Super cyclone (222 Km/Hr and Above)	Total disruption of Power lines

**Heat Wave** : Heat wave is considered if maximum temperature of a station reaches at least 40°C or more for Plains, 37°C or more for coastal stations and at least 30°C or more for Hilly regions. Following criteria are used to declare heat wave:

**Based on Departure from Normal**

- Heat Wave: Departure from normal is 4.5°C to 6.4°C
- Severe Heat Wave: Departure from normal is >6.4°C

**Based on Actual Maximum Temperature (for plains only)**

- Heat Wave: When actual maximum temperature  $\geq 45^{\circ}\text{C}$
- Severe Heat Wave: When actual maximum temperature  $\geq 47^{\circ}\text{C}$

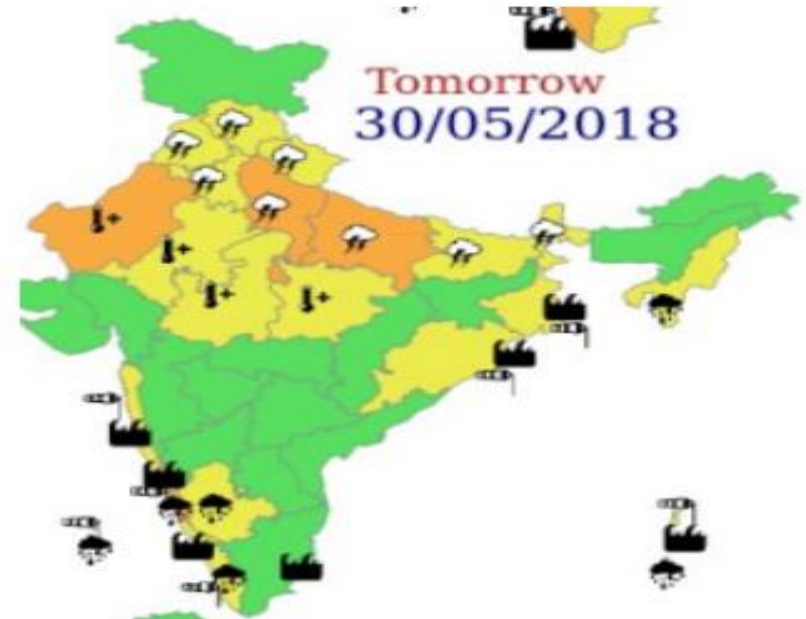

To declare heat wave, the above criteria should be met at least in 2 stations in a Meteorological sub-division for at least two consecutive days and it will be declared on the second day.

Fog will have a sharp/smooth boundary ,while low clouds will have disbursed boundary. In animation Fog will remain stationary while low clouds will show some movement.

# RAPID

## ( Real time Analysis of Products & Information Dissemination )

**RAPID-Real time Analysis of Products & Information Dissemination** is a web based quick visualization and analysis tool for satellite data on a real time basis. . Using RAPID one can interact like actual satellite workstation and may zoom to any actual resolution.

# METAR

A METAR weather report is predominantly used by pilots in fulfilment of a part of a pre-flight weather briefing, and by meteorologists, who use aggregated METAR information to assist in weather forecasting. METAR is the scheduled observation taken at the end of each hour/half hour (important Airports).

A typical METAR contains data for the

- temperature,
- dew point,
- wind direction and speed,
- precipitation,
- cloud cover and heights,
- visibility and
- barometric pressure.

**The visibility at an Airport can provide a good idea about status of FOG/SMOG.**

# Benefit achieved by Uttar Pradesh

- Meteogram, wind and rain forecast for 27/28/29-05-2017 helped in better load assessment of UP control area by U.P. State Load Despatch Centre.
- As anticipated, UP demand went down from 19000 MW to 17000 MW due to change in weather conditions.
- Accordingly, STOA & purchase from Power Exchange of the order of 2000 MW was reduced. i.e Backing down of approximately 13 MU of costly thermal generation .

**Total Power Exchange & Bilateral**

# Benefit achieved by BSES

Delhi Demand Met

Timely MW Reduction by BSES

May Tue 9 2017

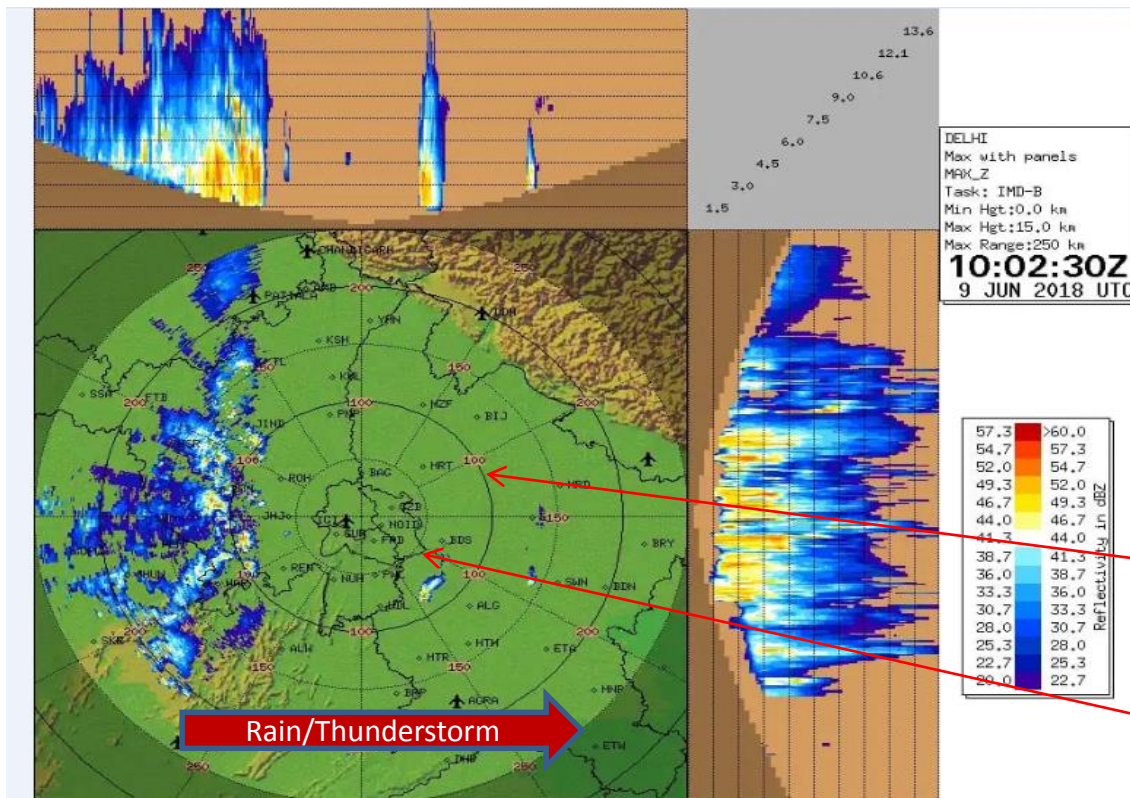

# Savings by BSES

S.no.	Date	Savings (Mus)

# Radar Image for Rain/Thunderstorm Monitoring

## Thunderstorms:

- A likely phenomena during summers
- Leads to Load Crash
- Excursion in Voltage and Frequency

# Radar Image for Rain/Thunderstorm Monitoring

# Radar Image for Rain/Thunderstorm Monitoring

• Near Real time Radar image helped in Timely Reduction of Generation in State Control area/ISGS Generation, RRAS (Reserves Regulation Ancillary Services) Regulation leading to better Load Generation balance in the Grid

## Activities Critical for Coastal Areas

- Observing Systems for Atmospheric and Oceanic Science & Services – multi-scale networks over **Land** (**Doppler Weather Radars; Automatic Weather Stations/Rain Gauges; High Wind Speed Recorders** etc.), **Sea** (**moored and drifting buoys, Argo Floats, ADCP and Current Moorings** etc.), in-situ airborne & ship borne platforms and **Satellite Based systems** (**INSAT, Kalpana, OCEANSAT, Megha Tropique, NOAA, EUMETSAT** etc.) for real time data transmission and reception
- 24X7 system of severe weather surveillance and forecasting (continuously scaling up) - **Cyclones; Tsunami and Storm Surges; all other severe weather systems**; River basin scale meteorological support for river flood warning system
- Continuously monitoring the pattern of sea level changes all along the Indian coastline with established 26 tide gauges.
- Vulnerability of the Coastal Zones – [3-Dimensional Geographical Information System (3D GIS) maps for the entire coastal stretch; mosaic with other available topographic and thematic high resolution maps at 1:100000; 1:25000; 1:5000 scale; shoreline change maps at 1:25000 scale] for effective emergency response, risk reduction, sustainable shoreline management and natural resource management
- Climate services information products viz. **spatial monthly scale anomalies of rainfall and temperature; minimum/maximum temperature; standardized Precipitation Index (SPI)** etc. along with severe weather events.

# Future Plans for Coastal Areas

- Building multi-scale & multi-sensor networks for Long-term measurements of various environmental/terrestrial/marine/bio-geochemical/GHGs variables at large/regional/local/eco-system scales to **capture vital signatures of the earth system response to climate variability and change**
- Comprehensive multi-institutional Program for **Changing Water Cycle; thermal expansion of Bay of Bengal and Arabian Sea; Sea Level Changes & coastal zone impacts; Engineering and Technical Solutions for Structural Safety of Coastal Investments**
- Build Earth System Model (ESM) to treat comprehensively the coupling of various sub-systems (ocean-atmosphere; land-atmosphere; cryosphere-atmosphere; biogeochemical cycles over ocean and land; aerosols-GHGs-clouds-precipitation etc.) to improve our predictions of **weather, climate, hazards, air quality and Environment**
- Expanding services in support of four key climate-sensitive sectors, including **agriculture, water, health, Energy and climate and disaster risk management** for rendering customized services for societal, environmental or economic benefits
- Accelerating initiatives **related to Capacity Building – for regular induction of skilled and specialized manpower**

# Activities to be augmented to the Multi-Hazard Early Warning Systems

## ❖ Observational and Prediction Systems

- Hourly and 3-Hourly Telemetered Data (Land, Ocean and Space based observational systems)
- Need for seamless data sharing /exchange of information amongst agencies
- Build local scale severe weather forecast systems

## ❖ Quantification of Impact

- Impact assessments to include likely spatial impacts on ground based on severe weather forecasts

## ❖ Customization of Early warning system products

- Development of Decision Support Systems(DSS) for sectoral customization of Early warning system products
- Need for developing decision making tools for effective response strategies at district and sub-district level

# Local Scale Multi-Hazard Assessment Tools Development

- ❖ Adaptation of appropriate district scale models for storm surge/tsunami waves along coastal River/Delta systems [To generate storm surge/Tsunami inundation Maps]
- ❖ Development of appropriate regional scale models for Wind Damage Assessment, Heavy Precipitation and spatial inundation scenarios in coastal urban areas, Coastal SEZs/EPZs/Oil and Gas Installations and catchment scale coastal river hydrological models[To generate Wind Hazard Maps]
- ❖ Integrate the above information in to a multi-hazard risk management and decision making tool for district level multi-hazard response planning

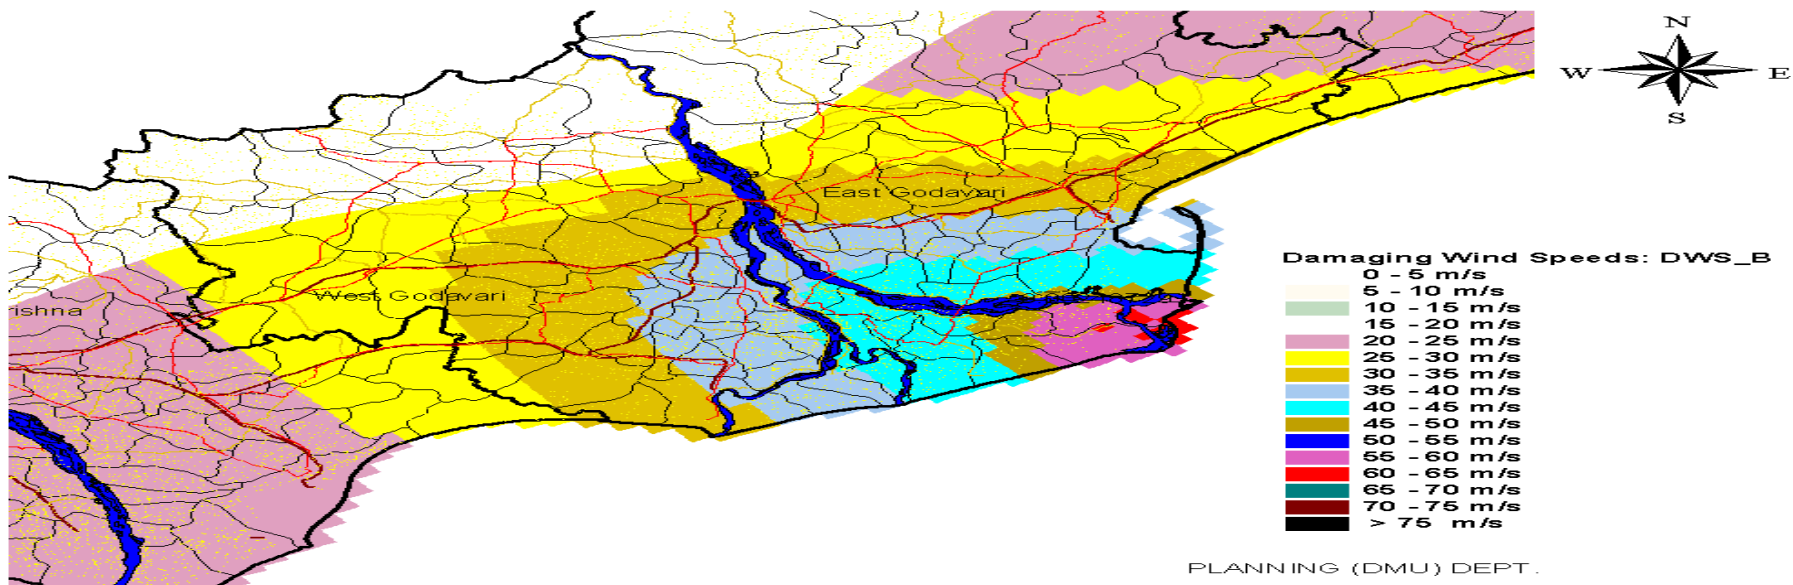

# Quantified Information

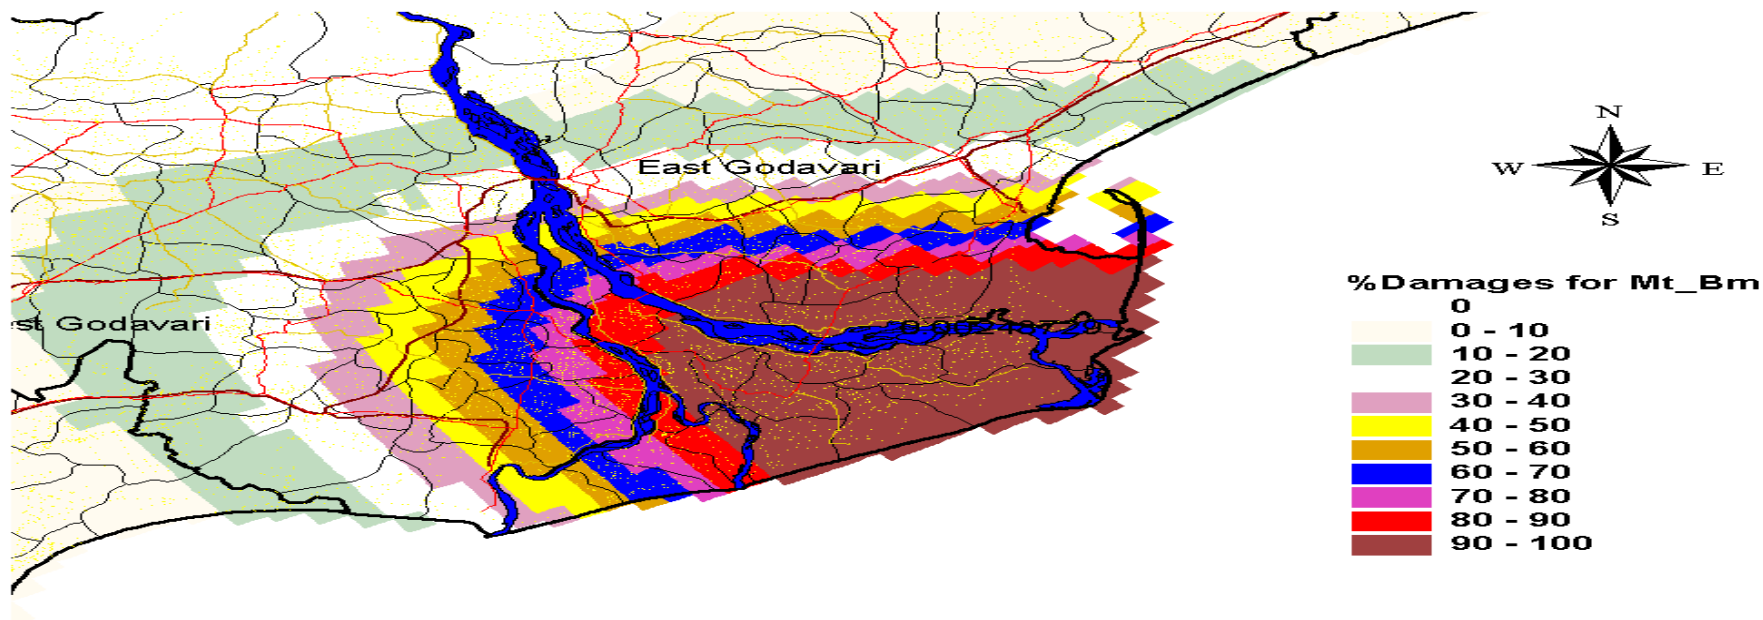

- Population to be affected
- Densely populated villages
- Areas under threat
- Threat to Crops
- Damage to Structures
- Rail and Road network in the affected areas
- Vulnerable points
- Cyclone shelters

Integrated Coastal and Marine Area Management

Indian Institute of Tropical Meteorology

National Centre for Antarctic and Ocean Research

National Institute of Ocean Technology

Indian National Centre for Ocean Information Services

Centre for Climate Change Research

Advanced Training in Earth System Science and Climate

भारत मौसम विज्ञान विभाग  
INDIA METEOROLOGICAL DEPARTMENT

# Agencies dealing with various Hazards within the Ministry of Earth Sciences, Government of India

## HYDRO-METEOROLOGICAL HAZARDS – IMD, INCOIS

Tropical Cyclones, Local Severe Storms, Winter Systems.

[Support for Floods, Drought Snow Avalanches]

Climate change impacts on severe weather events (IITM and IMD)

## ENVIRONMENTAL IMPACTS

- Air pollution & Haze, FOG, Smog (IMD)
- Coastal Zone Management (NCCR)
- Coastal Erosion (NCCR; NCESS)
- Eco-system monitoring/ modeling (IITM and IMD)

## GEOLOGICAL HAZARDS

Earthquakes & Tsunamis (NCS and INCOIS)

[Support for Rain Induced Landslides/Mudslides (IMD; NCESS)]
